

Masimo Rad-8

Compact Design with Unmatched Clinical Performance

Masimo SET pulse oximetry provides accurate monitoring for all levels of patient care, including life threatening cases where motion and/or low perfusion is likely. Clinicians can rely on accurate measurements and true alarms from a trustworthy source and caregivers can care for the patient, not the monitor.

Unicare - We Care for Life

The Unicare team is devoted to providing superior service and the latest technology that enables freedom, flexibility and independence. The accuracy of Masimo SET pulse oximetry has been shown to reduce false alarms by 95% without missing true clinical events. It's simple, easy to use interface enables quick setup and alarm management with one touch programming. In addition, the large LED color display is easy to read at a distance.

Masimo Rad-8 is compact, lightweight and ideal for acute and alternate care settings including long term care facilities, homecare and sleep labs.

"Unicare is responsive - all the time, everytime."

Evans Family, Anaheim, CA

Masimo Rad-8 Features:

- Sleep Mode easily configures system to perform bedside studies
- Home Mode allows for safe and accurate monitoring
- Perfusion Index (PI) indicates arterial pulse signal strength and may be used as a diagnostic tool during low perfusion
- Low Signal IQ® (SIQ) highlights conditions of low signal quality
- Up to 7 hours of internal battery life when fully charged
- FastSat™ tracks rapid changes in arterial O2 with high fidelity unlike any other pulse oximeter
- Adjustable averaging 2 to 16 seconds
- Nurse call interface
- 72 hours of trending memory
- Available in horizontal and vertical configurations
- Compatible with Philips Vuelink device interface module
